

A8 Core™ — Why It Pays For Itself

A8 Core™ replaces a bank core + a wealth platform + a retirement recordkeeper + a document/e-sign vendor + a compliance stack with one integration — collapsing cost, time, and risk.

The value levers

- **Time-to-launch:** Months of account-infrastructure build become one integration
- **Vendor consolidation:** Five vendors become one platform — one contract, one ledger, one source of truth
- **Engineering redeployed:** Your platform team moves from undifferentiated plumbing to the product that wins customers
- **Coverage unlocked:** Offer account types your stack couldn't support before — new revenue, retained customers
- **Compliance & audit:** Native controls and reporting — no compliance back office to staff and maintain

De-risked

Secured by B5 Secure (per-record authorization, signed requests, tamper-evident audit) and compliant by design — you ship regulated products without assembling the regulated core underneath.

ROI is modeled from your own build estimate, vendor count, and team cost. Market figures are presented as ranges with a bottoms-up estimate; we quantify your case with you.
