

The operating system for financial accounts.

The account operating system — layer 2: it clears, settles and records.

ELEVATOR PITCH

A8 Core™ is the API-driven, bank-grade account core that fintech and wealthtech build on — opening, funding and transacting across every account type on one multi-tenant, white-label integration. One core across DDA, retirement, taxable, trust and private-fund — secured by B5 Secure™, a named component.

THE MARK

A8 Core™

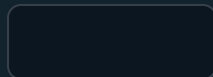

The lockup is pure type: two runs, one baseline — no plate, no symbol. It is artwork, not live text; never re-typeset it.

THE WORDMARK

“A8” carries the accent at weight 800; “Core” is near-white at weight 500, ™ raised at 0.30em. Clear space equals the cap height of the first letter, on all four sides.

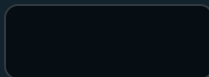

Home position: top-left on every produced asset.

Web display. Produced assets are set in Arial — this document included.

Inter / JetBrains Mono

Web body and code. Produced mono is Courier New.

DO

- ✓ Reverse lockup on ledger ground is the default
- ✓ Keep clear space equal to the cap height of the “A”
- ✓ State structural counts; cite IRS releases for limits
- ✓ Say “secured by B5 Secure™” — a named component

DON'T

- ✗ Describe the accent as blue — it is verdigris
- ✗ Stretch, condense, re-typeset, or add effects to the lockup
- ✗ State ROI or market figures without a named, dated source
- ✗ Import B5's GTM or scale claims into A8 copy

“Find it on InvestNow. A8 Core™ clears, settles and records it. Investor Services custodies it. B5 Secure™ authorizes every record it touches.”
